

The Review of M73B1 Repro Scope

I received the scope in about 4 days from date of purchase.

Visually the scope and mounting hardware looks great.

I mounted the scope bracket to my 1903a3 rifle and it fit with no fitting required I had to do a little filing on the front Redfield mount to get it to turn into the lock position.

After verifying that both scope rings would attach to the mount without any problem, I slide the scope into the rings.

I positioned the scope at a comfortable distance from my eye for aim, and then I tighten the ring screws slightly.

Next my 30-06 bore laser was chambered and I went out to rough set the scope.

First I got the scope cross hairs level & plum., then adjusted the cross hairs on the bore laser.

It took just a few shots to get the scope zero'd at 100 yards, then I checked to see what each "click" of the adjustments would be at the 100 yard mark. This turned out to be roughly 1/8" per click for both vertical and horizontal adjustments.

While testing this, I also wanted to see how far I could move the cross hairs in each direction. I moved a total of 10 clicks in each direction from vertical and horizontal with no problems.

You may get more adjustment than that, but I did not want to risk damaging the scope.

Overall 5 stars out of 5.

Optics are crystal clear with a good range of adjustment for focusing..

Scope mount and Scope rings are very high quality with a really nice finish.

Very nice engraving.

This 1903a3 M73B1 is a great purchase for those who want to convert their 1903a3 rifle into the sniper version, and the entire package delivered cost substantially less than what I saw Weaver 330 scopes selling for.

My "next" purchase from RSM will be their Reproduction ZF39 Scope & Side Mount for my German K98 rifle.
